

Clean air is a basic requirement of human health and well being. Air pollution however continues to pose a significant threat to health worldwide. There are no locally adopted air quality standards (either here in Alderney or in Guernsey) and there are insufficient regulatory mechanisms to address sources of pollution. Please take time to fill out the following survey to assist the General Services Committee to assess which areas of air pollution concern the community and to assist in investigating appropriate measures that the States of Alderney can adopt to monitor and regulate emissions.
